Application Development

We develop web applications, intranet or internet, portal applications on .NET and Java Enterprise platforms. We take care of security, scalability, extensibility, ease of maintenance and the internationalization needs of the application

Support & Maintenance

We provide technical support for your existing web applications 24 x 7. Our support staff is well trained to communicate and act fast to meet or exceed SLA. The support team can fix the defects and the do enhancements to the application. We also offer maintenance services to help ensure smooth running and operations of existing business systems.

Migration Services

We help in migration of the legacy applications to the leading cutting edge technology. We help in the migration of the client server applications to web based intranet applications.

Database Management

We provide data modeling, capacity planning, pl/sql programming, and administration for oracle, sqlserver, msaccess and mysql databases.

Advisory Services

We assess the current application portfolio, identify the gaps and advise on application migration, new application development, technology migration, and application scalability & performance improvements.

SOA/ Web Services

We help our customers in implementing web services on top of their existing application. We understand the SOA needs and design and help in implementing the various services required.

Web 2.0 Applications

We offer implementation services for creating Rich Internet Applications. We develop web based interfaces using the latest web 2.0 technologies like AJAX, Mashups, XHTML, DHTML, CSS etc.
